

Payment by Instalments

Whether you are an organisation that is already working with their chosen Quality Standard and can confirm the benefits of gaining a continued external view of your organisation or whether you are an organisation that is considering working with emqc Ltd and our portfolio of services. Here at emqc Ltd we are mindful that there is a financial cost to these processes and for a lot of organisations, particularly smaller ones, this can be a major factor when considering and planning your options and choices.

In order to assist with this, emqc Ltd is pleased to announce that we are able to provide client focused payment by instalments options. These currently fall under two available options.

Option 1

If you decide to apply to emqc Ltd within three months of the date you would like your first assessment or review to commence you could apply to undertake Option 1. For example if your assessment or review were to be estimated at up to 2 days in total (inclusive of on-site and off-site time) payment could be arranged for 3 instalments. For example an assessment costing £1410 could be paid as 2 payments of £470 prior to the on-site date and a final payment of £470 to be paid on completion.

Option 2

If you are considering undertaking a first assessment or a review and apply to emqc Ltd in excess of 3 months of the date you would like this to commence you could apply for Option 2. This option enables you to commence paying an agreed monthly amount to emqc Ltd towards your assessment, in order to spread the cost. For example a 2 day assessment costing £1410 paid over a 6 month period would be approximately £235 per month.

We hope this is something that you will find helpful, and we will continue to look at similar options to help you either begin to receive our support or continue to benefit from our support.

All payment by instalments must be agreed in advance with our Finance Team and if you are interested in discussing any of the above information please contact our Finance Team on 0845 304 8600.
